

ABSTRACT

A computer case having a pull bar structure for removing a front panel has a pull bar slidably mounted on the bottom wall of the case. The front wall of the case is provided with a front panel. To remove or to mount the front panel, only one side panel has to be taken off first. The pull bar is then pulled so as to decouple a bulged fixing dot on a pressing end thereof with a fixing hole on a fixing member of the front panel. A computer case having a pull bar structure therefore simplifies the process of removing the front panel and saves a significant amount of time.
